

“Laser Tape Measure & Level”

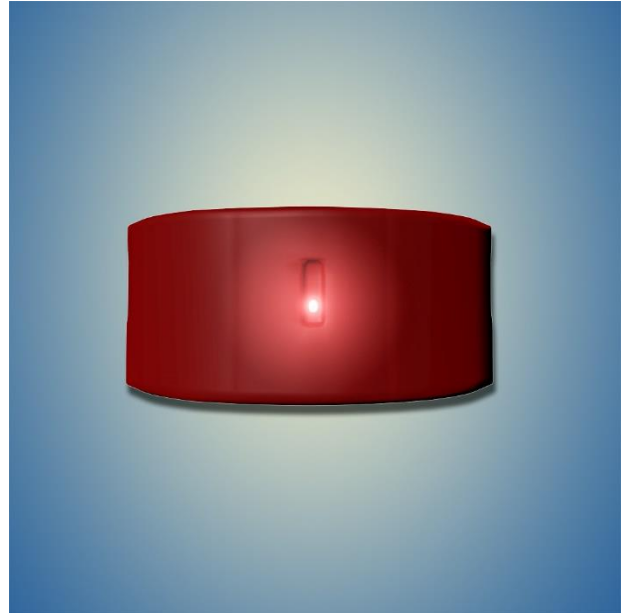

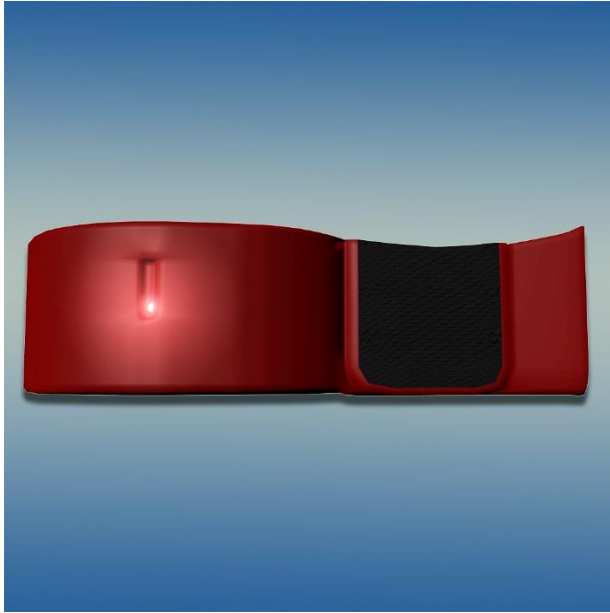

The Laser Tape Measure & Level is a one of a kind industrial pocket tool Laser In 4 Directions – Easy Grip – LCD Screen – Easy To Use – Measure & Level

The Laser Level Stud Finder is sure to be one of the most valuable tools you'll have on the jobsite. This 3-in-one device combines the laser level, distance measurer and stud finder all together to make an extremely handy tool. You'll reduce the size of your toolbox as soon as you introduce this powerful item.

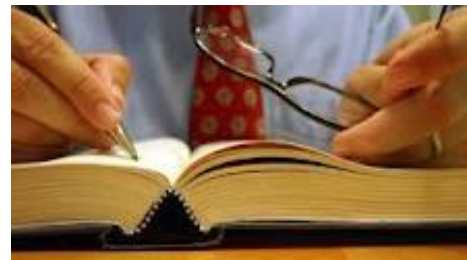

This device has an LCD screen, 4 oppositely directed lasers and a stud finder built in to help you combine three separate tasks into one in an instant. The lasers take the lion's share of the work by identifying the distance of any wall that is in its specific direction and also acting as a level to help you visually determine if an object is level or not.

The four separate values on the screen represent the distance from the wall/ceiling/floor. The line and dot symbols indicate whether or not a stud has been located. The solid and dashed lines represent whether the surface is level. If no dashed line appears and only the solid line is present then the surface is completely level. If it is the opposite then the degree of off balance will be shown by the way the solid and dashed lines intersect. There is also an audio switch that sonically informs you of the density of the surface and stud location.

To help make this device as versatile as possible, it also features a completely flat back and bottom surface and a tapered hole near the top of the device. The tapered hole and flat back and side grant you the ability to mount the device to any surface or tripod so that your tasks are that much easier. Add the Laser Level Stud Finder to your toolkit. It's guaranteed to find the right spot! This product would be low cost on the retail shelf and could sell in any big box, and specialty, stores making it a high volume sales product.

The inventor, Wayne Smith Lives in Reno, Nevada and had an idea for a better way to Level & Measure on walls. Wayne contacted the Mars Rising Network and had a provisional and design patent application filed and had the invention designed properly so that he may see success with this great idea and turn it into a real product. He is actively seeking a company that would have an interest in licensing the product for a royalty.

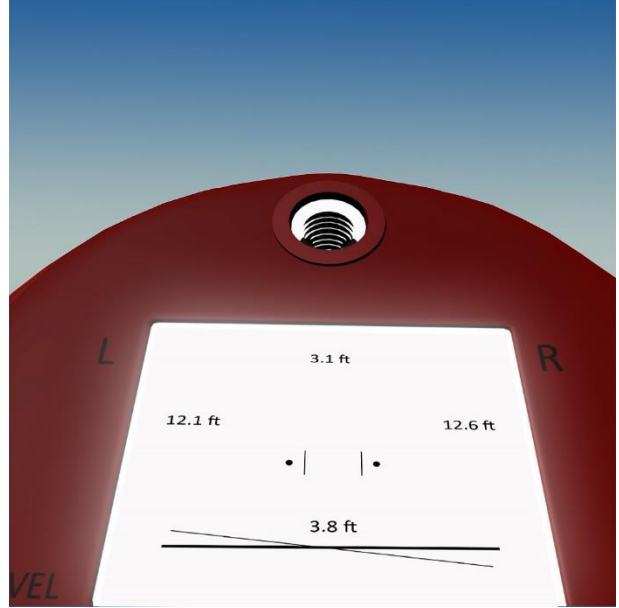

Patent Ability & Engineering

A provisional and design patent application has been filed as of July 2016. The Patent Search was performed by The Mars Rising Network and revealed nothing similar and that a granted patent could be obtained because of the unique design and functionality of the device as compared to other known devices.

The Market

The Domestic Market is very large to say the least. This product would sell in approximately 150,000 retail stores in the USA and throughout the international market.

The retail price would be from \$29.99 to \$79.99. The wholesale amount would be from \$14.00 to \$49.00 and the cost to manufacture would be from \$7.00 to \$35.00. The costs are an estimate of course ranging from USA or overseas manufacturing and distribution.

If you have an interest in more information regarding the Laser Tape Measure & level and are a serious company that would be interested in a licensing agreement or distribution please contact me directly.

Sincerely;

Wayne Smith/ Inventor / Patent Holder
